**Abstract:** *Diaeretiella rapae* (McIntosh) (Hymenoptera: Braconidae, Aphidiinae) was described as *Aphidius rapae* by McIntosh in 1855. In 1960, Starý described a new genus *Diaeretiella* and put the species under it. A number of synonymy of *D. rapae* is listed herein. *D. rapae* is a polyphagous and exclusive aphid parasitoid. It parasitises about 98 species of the aphids infesting more than 180 plant species belonging to 43 plant families distributed in 87 countries throughout the world. However, the main hosts consist of *Brevicoryne brassicae* (Linn.), *Myzus persicae* (Sulzer), *Lipaphis erysimi* (Kalt.) and *Diuraphis noxia* (Kurdjumov). The food plants mainly include oleiferous and vegetable brassicas and cereal crops. The parasitoid has been used as a biocontrol agent against *D. noxia* infesting cereal crops.

**Keywords:** *Diaeretiella rapae*, systematic, distribution, host plants, aphids, cereal crops, brassica crops

---

### **1. INTRODUCTION**

*Diaeretiella rapae* (McIntosh) (Hymenoptera: Braconidae, Aphidiinae) is a highly polyphagous parasitic wasp parasitising exclusively aphids (Homoptera: Aphididae) throughout the world infesting hundreds of plant species, both cultivated and wild (Table 1). *D. rapae* was reported as the most effective natural enemy against the cabbage aphid, *Brevicoryne brassicae* (Linn.) [1] and it has been observed to cause as high as 72% parasitism in the Netherlands [2] and 76% parasitism in Kenya [3]. In India, the rate of parasitism of mustard aphid, *Lipaphis erysimi* (Kaltenbach) on rape-seed mustard crop varied from 20% [4] to 51% [5] in Himachal Pradesh to 60-97% in Maharashtra [6].

Because of its widespread distribution and polyphagism, *D. rapae* is an important, naturally occurring parasitoid of several pest aphids on different crops worldwide [2-3, 6-12]. The earlier works on its biology, ecology and host killing efficiency, *D. rapae* has established its importance in controlling the mustard aphid [*L. erysimi*], cabbage aphid [*B. brassicae*], green peach aphid [*Myzus persicae* (Sulzer)] and RWA [*Diuraphis noxia* (Kurdjumov)] [2-3, 13-41]. The parasitoid was imported in USA from regions throughout the world to control the RWA [42-46] on wheat. Keeping in view the economic importance of the parasitoid, the present article reviews the informations available in literature regarding the taxonomy, nomenclature, distribution and aphid-host plant relations of *D. rapae*. All the generic names of aphids and plants were checked for their taxonomic validity using Aphid Species Files [<http://aphid.speciesfile.org>] for valid name of the aphids and GRIN [Germplasm Resources Information Network; <http://www.ars-grin.gov>], and ITIS [Integrated Information Taxonomic System; <http://www.itis.gov/>] for valid name of the plants.

## 2. TAXONOMY AND NOMENCLATURE OF DIAERETIELLA RAPAE

The parasitoid wasp was described as *Aphidius rapae* by McIntosh [47]. Several synonyms have since been used for the species [48]. Gahan [49] put the species under the genus *Diaearetus* Förster, 1862 and this name has been in general use until 1960. In this year, Starý [50] revised the genus *Diaearetus* and concluded that “the genus *Diaearetus* is monotypic including only the genotype *Aphidius leucopterus* Haliday, 1834 as it was originally stated by Förster in 1862”. He suggested that the other species, which were included by various authors in the genus *Diaearetus*, should be transferred to other genera of the family. Starý [50] described two new genera *Diaearetella* Starý, 1960 and *Diaearetellus* Starý, 1960 that included most of the species kept under the genus *Diaearetus* Förster, 1862. *Diaearetella* includes type species as *Aphidius rapae* McIntosh, 1855. Mackauer [51] refuted the view of Starý [50] and suggested that the female genitalia in *rapae* are typical to the genus *Aphidius* and concluded that the species should be included in the genus *Aphidius* Nees, 1818 under a subgenus *Diaearetella* Starý, 1960 as *Aphidius (Diaearetella) rapae* (McIntosh, 1855). In past, while describing its biology Hafez [2] agreed with the view of Mackauer [51]. Apart of the above discussion, the taxonomic details of *D. rapae* have also been discussed in recent past [52-54]. Following are the accepted synonymy of *D. rapae*:

- = *Aphidius affinis* Quilis, 1931, EOS, *Revista Espanola de Entomologia*, 7: 48-50, Spain
- = *Aphidius brassicae* Marshall, 1896 in Andre, *Spec. Hym. Eur. et d'Alg.*, 5, 597-598, England
- = *Aphidius rapae* Curtis, 1855, in McIntosh's *Book of the Garden*, 2, 194.
- = *Aphidius rapae* McIntosh, 1855 (Species - Type), *Book of the Garden*, 2, 194.
- = *Aphidius vulgaris* Bouche, 1834, *Naturgeschichte der Insekten, besonders in Hinsicht ihrer ersten Zustände als Larven und Puppen*. Berlin. 1-216, Italy.
- = *Diaearetus croaticus* Quilis, 1934, EOS, *Revista Espanola de Entomologia*. 10:5-19, Croatia.
- = *Diaearetus (Aphidius) obsoletus* Kurdjumov, 1913, *Rev. Russe Ent. St. Petersburg*, 13, 25-26, Ukraine.
- = *Diaearetus aphidum* Mukerji & Chaterjee, 1950, *Proc. R. Ent. Soc. Lond. (B)*, 19, 4-6, Pakistan.
- = *Diaearetus californicus* Baker, 1909, *Journal of Entomology*, 1, 22-25, USA.
- = *Diaearetus chenopodii* Förster, 1867: Kirchner, 1867, *Catalogus Hymenopterorum Europae. Vindobonae*, 125 (*nomen nudum*)
- = *Diaearetus napus* Quilis, 1931, EOS, *Revista Espanola de Entomologia*, 7, 25-84, Spain. Quilis, 1934, EOS, *Revista Espanola de Entomologia*, 10, 6-7, Czechoslovakia, Yugoslavia.
- = *Diaearetus nippensis* Viereck, 1911, *Proceedings of the United States National Museum.*, 40, 182, Japan. Takahashi, 1925, *Dept. Agric. Govt. Res. Instt., Formosa Report*, 16, 1-74, Taiwan.
- = *Diaearetus plesiorapae* Blanchard, 1940, *Rev. Chil. Hist. Nat. Santiago*, 44, 45-48, Argentina.
- = *Diaearetus ferruginipes* Ashmead, 1890, *Insect Life*, 3:57-61, USA.
- = *Lipolexis chenopodiaphidis* Ashmead, 1888 (1889), *Proc. U.S. Nat. Mus.*, 11, 671, USA.
- = *Lysiphlebus crawfordi* Rohwer, 1909, *Transactions of the American Entomological Society*, 35:99-136, USA.
- = *Misaphidus halticae* Rondani, 1877, *Bollettino della Societa Entomologica Italiana*, 9:166-206, Italy.
- = *Trioxys piceus* Cresson, 1880, *USDA Annual Report for 1879*, 260, USA.
- = *Diaearetella aphidum* (Mukerji & Chatterjee, 1950)
- = *Diaearetella brassicae* (Marshall, 1896)

- = *Diaeretiella californicus* (Baker, 1909)
- = *Diaeretiella chenopodiaphidis* (Ashmead, 1889):
- = *Diaeretiella chenopodii* (Förster, 1867)
- = *Diaeretiella crawfordi* (Rohwer, 1909)
- = *Diaeretiella croaticus* (Quilis, 1934)
- = *Diaeretiella ferruginipes* (Ashmead, 1890)
- = *Diaeretiella halticae* (Rondani, 1877)
- = *Diaeretiella napus* (Quilis, 1931)
- = *Diaeretiella nipponensis* (Viereck, 1911)
- = *Diaeretiella obsoletus* (Kurdjumov, 1913)
- = *Diaeretiella piceus* (Cresson, 1879)
- = *Diaeretiella plesiorapae* (Blanchard, 1940)
- = *Diaeretiella rapae* (Curtis, 1855)
- = *Diaeetus chenopodiaphidis* (Ashmead, 1889): Timberlake 1918, *Proc. Haw. Ent. Soc.*, 3(5): 401.
- = *Diaeetus rapae* (Curtis, 1860): Gahan 1910, *Proc. Ent. Soc. Wash.*, 12:180.
- = *Diaeretiella vulgaris* (Bouche, 1834)

Recently, *D. rapae* was redescribed with morphological variability of several Indian populations [54-55].

### **3. DISTRIBUTION AND HOST RANGE OF DIAERETIELLA RAPAE**

The origin of *D. rapae* is considered to be of Western Palaearctic [56] and at present it is almost cosmopolitan in distribution. It was recorded from about 87 countries of all continents except Antarctica (Table 1). In India, it was first recorded on *B. brassicae* [57] and then on *L. erysimi* [58]. Sethumadhvan and Dharmadhikari [59] studied its distribution in India. At present, it has been reported from almost all states of India where cabbage and mustard crops are cultivated (Table 2).

The parasitoid, *D. rapae* parasitises about 98 species of the aphids infesting more than 180 plant species belonging to 43 plant families distributed in 87 countries throughout the world (Table 1). However, the main hosts consist of *B. brassicae*, *M. persicae*, *L. erysimi* and *D. noxia*. The food plants include mainly oleiferous and vegetable brassicas and cereal crops. In India, fortunately, the notorious cereal pest *D. noxia* is not recorded so far. In the north eastern Uttar Pradesh *D. rapae* parasitises the aphids infesting several oleiferous crops such as *Brassica juncea* L., *Brassica rapa* subsp. *oleifera* (DC.) Metzg. and *Brassica nigra* (L.) W. D. J. Koch and vegetables such as *Raphanus sativus* L., *Brassica napus* L., *Brassica oleracea* var. *capitata* L., *Brassica oleracea* var. *botrytis* L., *Brassica oleracea* var. *gongyloides* L. etc. [60]. [1] (1957) In England [1] and in Germany [14] it was observed mainly parasitising on *B. brassicae*. However, in the Netherland it was observed parasitising on *M. persicae* in the field in a greater proportion than other species of aphidiine parasitoids when they infest brassica crops, however, a significant preference for *B. brassicae* was recorded [2]. Therefore, in Europe, *B. brassicae* and *M. persicae* both serve as important hosts for the parasitoid on brassica crops. In the last few decades, the parasitoid was found heavily parasitising RWA, *D. noxia* in European, American and to some extent to African countries (Table 1). However, little is known about crossing between different lines and strains, or about populations switching between different host species. Gonzalez *et al.* [43] reared *D. rapae* in USA that were obtained from 7 countries (Russia, Pakistan, Syria, Jordan, Spain, Yugoslavia and South Africa) but only the Pakistan strain merit first. RWA is not reported from India, although it has been recorded from Pakistan [61].

**Table1.** Distribution and host range of *Diaeretiella rapae* (Aphid species/Host plant species/Country/References)

**1. *Acyrthosiphon kondoi* Shinji**

- *Medicago sativa* L. (Fabaceae): Brazil [62]

#### **4. CONCLUSION**

*D. rapae* is a highly polyphagous parasitic wasp and parasitises exclusively aphids of several species, however, it is most effective natural enemy of the cabbage aphid (*B. brassicae*) mustard aphid (*L. erysimi*) and green peach aphid (*M. persicae*) on brassica crops such as cabbage and mustard crop through out the world. In addition, in most of the European, American and African countries, it parasitizes Russian wheat aphid (*D. noxia*) infesting cereal crops such as wheat, barley, oat, corn etc. Biological studies of *D. rapae* indicate that the parasitoid has potential to control the population of the abovementioned aphid species which are major pests of their host plants.

### AUTHORS' BIOGRAPHY

**Dr. Rajendra Singh** is Professor & Head of the Department of Zoology and Department of Biotechnology, D.D.U. Gorakhpur University, Gorakhpur and has 38 years of experience in the fields of bioecology and biosystematics of aphids and their parasitoids and predators, published about 200 research articles of international repute, authored 6 text/reference books, supervised one D.Sc. and 25 Ph. D. students, and completed 12 research projects. He is fellow/life member of several scientific organizations/societies, Chief Editor of *Journal of Aphidology* and is on the editorial/ reviewer panel of several International Journals. Prof. Singh also served in the university as Pro-Vice Chancellor.

**Ms. Garima Singh** is a Ph.D. Student in the Department of Zoology, Rajasthan University, Jaipur and doing research work on the factors affecting progeny sex ratio of an aphid parasitoid, *Lipolexis oregmae* (Gahan) (Hymenoptera: Braconidae, Aphidiinae). She has published two review articles. She has compiled the food plants of cotton aphid, *Aphis gossypii* Glover recorded in India.
