Abstract: By following the entire categories of ECA’s, our targeted respondents were university students. Our D.V was “Personality” and I.V’s were “ECA’s”&“Educational Performance” We’ve found that more participation in ECA’s can make the students as a shining stars, build up their leadership qualities, make them future leaders and improve their sportsmanship. Our hypotheses also retrospective that Extracurricular Activities can develop the personality (Big Fives). Our targeted audience were university students (N=941) who belongs to different departments of five dissimilar universities, as well as Arid Agricultural University Rawalpindi, B.Z. University Multan, COMSATS IIT Vehari, GC University Faisalabad and NCBA&E-Layyah campus. Most of the respondent were interested in the cricket, bivariate correlation and the Results of our research study are robust because (Significant level) Sig. (I-tailed) among D.V & I.V were significant and strongly positive to each other. We’ve used the five point likert scale to check the personality traits and then analyzed the descriptive statistics, likewise regression coefficient, Pearson (r), R², ANOVA, Standard Deviation, Durbin-Watson and Residuals Statistics. Cronbach’s Alpha was 0.8.

Keywords: ECA’s, Personality, improvement, leadership, academic achievement.

1. CHRONOLOGICAL VIEW OF ECA’S INVOLVEMENT

Usually the involvement in extracurricular activities (ECAs) produce the positive attitude, enhance the social and academic development among the students (Werner & Smith, 1982; Andre & Holland, 1987; Gordon, 1996; Young et al, Silliker & Quirk, 1997). However this statement not always supported in empirically and theoretically, that schools were idealistic place only for academia purposes between the decade of 1950 to 1960 (Gholson, 1985).

Minor Extracurricular activities were part of the traditional schools that were directly link to curriculums (Marsh, 1992; Cairns & Mahoney 1997). Student’s athletic activities were disputed that it’s wasatge of time (Marsh, 1992; Camp, 1990; McNeal, 1998). But research from 1960 to 1970 retrospective that enrolment in ECAs make the students more civilize, cultural and social (Spady, 1970; Otto, 1976). In the decade of 1970 to 1980 advanced social and famous students became the role model & leader (Gerber, 1996). Marsh emphasized it the zero sum model (students involved in activities have low interest & time for study, so they’ll suffer, because no pass and no play) (Gerber, 1996). Research from 1980 to 1990 formed qualitative & empirical evidences for zero sum model that ECAs develops good social relations & improve problem solving skills (Spady, 1970; Andre & Holland, 1987; Marsh, 1991; Spreitzer & Snyder, 1992; Fejgin, 1994; Gordon, 1995).

Now latest speculation has been acknowledged that participation in ECAs is extremely advantageous (Midgley, Eccles, 1990; Gerber, 1996; Rock & Finn, 1997) now argument built on previous assumption that academic and social both factors are necessary to achieve the goal (Armentrout, 1979; Gholson, 1985; Marsh, 1992). Participation in activities elevates the academic concepts as well as other skills. It acknowledge in school/ university. Also improve the cultural & social values and student’s performance (ODonnel, 1992; Ford, 1995).
2. INTRODUCTION

Any adolescent shouldn’t be left behind from their life visions and achievements, American institutes are strongly emphasizing on extracurricular activities, (Lewis 2005). In this scientific revolution age human education considered as primary step to motivate the individuals. It’s playing a fundamental role in human capital and with the help of it every student can link their opportunities properly (Battle & Lewis, 2002). It ensures the attainment of skills and knowledge that enhance the quality and productivity of their life. It also show the new ways of economics intensification and student’s personality development (Farooq et al 2011)

Mostly teenagers of America, they participate in and outside the institute activities as well as dance, youth groups, athletic games, clubs, drams, scouts, theater, students council and sports etc, it determine that what type of personality they have? (Wilson, N.2009). These extracurricular activities are the integral part of the educational program. So the extracurricular activities have a legitimate relationship with the student’s responsibilities, human needs, character, social linkages, talents, skills and solution of critical circumstances (Klesse & D’Onofrio 2000)

Those students who don’t participate in the activities at their educational phase, they face an inadequate and different perception at the recruitment time in corporate level, and then they advised to get any diploma for skills development for getting a job. Different surveys reports show that recruiters hire only those candidates who are on the top of their list that include leadership and interpersonal skills (Eberhardt et al 1997). Successfully emotional intelligence can be achieved in the real world via extracurricular activities that learned during the academic age at institutes (Rubin et al 2002)

Professional, career and occupation of any individual can be measure and develop during the academic time span at professional institutes (Hammer 2000) that focus on the student’s extracurricular activities. These activities help out the students in socialization (Heckman & Kautz 2013).

3. OBJECTIVES OF THE STUDY

The main objectives of the study were to:

3.1 Scrutinize the importance of ECAs
3.2 How ECAs revolutionize the attitude and personality?
3.3 Factors that play a vital role in personality development

4. REVIEW OF LITERATURE

Rubin, R. S et.al (2002) Success of any organization based on high intellects. University recruiters analyze the candidates who’ve emotional intelligent, well rounded and having interpersonal skills, try to examine the correlation flanked by interpersonal skills, leadership and development with ECA, and eventually analyzed that they’ve a momentous relationship. Darling, et.al (2005) Participation in ECAs (Extracurricular activities) and adolescent have a positive relationship, more involvement in ECAs build attitude to cope up confusion and adolescent. Those pupils who actively participate in ECSs are reported better as compare to others. Farooq, M. S et.al (2011) Multiple factors can influence on the student’s performance in secondary level, as well as the high socioeconomic status & parental literacy rate effect in the development of student’s life. Wilson, N. (2009) Actively participant students in ECAs generally get advantages likewise superior test scores, educational attainments, outdoor & leadership skills, better team work & grads and better academic concepts, they quit drugs and absenteeism but ECA often cost the money.

Heckman & Kautz (2013) Cognitive and the non-cognitive skills can be measured after participation in ECAs it stimulates personality qualities, preferences, motivations in school domains. Appreciation necessary to enhance the skills that invest in the school or university age, but it offered by the triumphant families. It’ll be helpful in later life. Lewis, C. P. (2005) Proficiency in social skills & educational psychology promote in the presence of extracurricular activities, among the 141 well-know studies 41 meta analyses shows that adolescents & children (student’s) performance were considerably related to the pro-ECAs. Singh Annu & Mishra Sunita (2005)120 respondents between 13-16 age, who’ve participated in 6 types of ECAs (Horse riding, Yoga, Viz, Music, Sports and Dance) these ECAs influenced the students in the development of social skills, good grades, regularity, self-concept, and degree completion.
Role of ECA’s (Extra Curricular Activities) in Personality Development

Soe, H. P. (2014) Newsletters and documents of Myanmar University are revealed that objective, mission statement and learning outcomes of LAP (Liberal Arts Program) which were designed; these were achieved with the help of participation and taking interest in ECAs. Kolchenko, K., & Kozlikovska, N. (2012) A sound balanced amalgamation of the learning, practice and systematic research can be possible with the help of only ECAs not in traditional way of education. Park, D. (2015) Potential ECAs can develop the language proficiency, emotional & social wellbeing, fantastic academics interest and marvelous confidence among the pupils. Massoni, E. (2011) Future of students determined in their activities that they do at home after school before coming parentage. Wangai, M. M. (2012) combination of student’s teachers & parentage’s talent can enhance the performance and talent of pupils by ECAs. Reva, A. (2012) foreign language can be learned with the help of ECAs in Russia & Canada. Lisa Keenan (2015) Perspective of Psychology, economics and social sciences can be develop in labour market and career development’s path designed in college ECAs. Pitts, S. E. (2008) Music with the help of extracurricular activities retrospective and evaluate the life engagement of teenage in British school. Bloomfield & Barber (2010) Adolescents of Australian students and their positive & negative aspects lucratively get rid off by extracurricular activities.

Fung & Wong (1988) analyzed that Involvement in the extracurricular activities having a constructive relation with acceptance by class mates, academic performance, carrier development and student’s personality in Hong Kong.

5. RESEARCH METHODOLOGY

Cross sectional data was used in this research study. Data was collected by survey from different five universities that were accredited from HEC Pakistan. We’ve used the both primary and secondary data. Primary data collected with the help of questionnaire from five universities. Secondary data was collected from books, research papers, internet and magazine journals etc.

5.1. Selected Variables

In this research study one Dependent Variable “Personality” (Extraversion, Agreeableness, Conscientiousness, Emotional stability v/s Neuroticism and Culture) and there are two Independent Variables (1- ECA’s and 2- Educational Performance) we have shown these above variables in our conceptual framework.

Figure1. Conceptual Model

This five factor arrangement personality model also called the “Five Bigs” it was replicated from Norman (1963), as well as Digman & Borgatta (1964), and finally Chock Takemoto (1981). Here Norman (1963) labeled the list of Personality into “Five Bigs” these are as follows.

(I) Extraversion or insurgency (assertive talkative, energetic)
(II) Agreeableness (cooperative, fine natured, trustful)
(III) Conscientiousness (responsible, orderly, dependable)
(IV) Emotional Stability versus Neuroticism (cool & calm, not easily upset, not neurotic)
(V) Culture (polished, intellectual, independent-minded)
These above mentioned factors know as “Five Bigs” Goldberg (1981). It represents that each of these factors is enormously broad. So these “Five Bigs” structure not explores the entire personality difference, rather these “Five Bigs” represents the personality at a maximum broadest level. Each element or factor summarized the maximum number of distinctions, aspects and maximum characteristics of the personality.

6. **TYPES OF ECAS**
(Gabler & Kaufman, 2004) sort out the ECAs into (13) thirteen categories.
1. Intramural team sport (football, hockey, baseball, soccer and basketball etc.)
2. Intramural individual sports (golf, cross-country, gymnastics and tennis)
3. Interscholastic team sports (football, hockey, baseball, soccer and basketball)
4. Interscholastic individual sports (golf, cross-country, gymnastics, tennis, track, wrestling and swimming etc.)
5. Orchestra, Chorus, Band and other music groups.
7. Drill team, Cheerleading and Pompom.
9. Pupil / Student’s government.
10. Academic club (Debate, computer, foreign languages, philosophy club and art etc)
11. School yearbook, magazines, newspapers etc.
12. Hobby Clubs (Chess and photography etc).
13. Services Club (Key Club and American Field Service etc).
(Mahoney, 2000) explored that Indonesian institutes also carry out the six ECAs as well as
1. Scouting.
2. Marching Bands.
3. Religious Programs.
4. Sciences and philosophy (science club and debate etc)
5. Sports (Basket ball, badminton, volley ball, karate and soccer etc)
6. Arts (Class room decoration, chart making, classic dancing drawing etc.)

7. **DISTINCTION OF RESEARCH STUDY**
Early research studies were based on, only Academic/educational subject wise performance (subject wise Mathematics, Science and English Marks) etc, but in this research we’ve highlighted that how personality can change with the help of ECA’s (Extra Curricular Activities)
- Our targeted audience was the university level student.
- We have analyzed the impacts of ECAs on the personality development.
- Graduate and post graduate level students have a different thinking level as compared to adolescents and school childes.

7.1. **Research Questions**
Basically three questions will attempt to explore this research study.
1. In what ECA’s students are choosing?
2. How many students participate in ECA’s?
3. What is relationship flanked by ECA’s and Personality Development?
4. How many times you’ve actively participated in ECA’s (13 core types)?
Role of ECA’s (Extra Curricular Activities) in Personality Development

5. How University’s Educational Performance related to the extracurricular activities?
6. How your Personality (Big Five) development was developed with the help of ECA’s?

7.2. Hypotheses

H₀: ECA’s don’t have a positive relationship flanked by ECA’s & Personality development.
H₁: ECA’s have a positive relationship flanked by ECA’s & Personality development.

7.3. Method and Procedure

This research study based on the cross sectional data. Our respondents were belonged to Universities. Questionnaire was used to collect data. Questionnaire based on the Demographic information, Academic information, extracurricular activities questions and finally Personality questions. Both Primary and Secondary data was used. Primary data collected from university surveys and secondary data from books, research papers, magazines, internet and other journals etc.

8. DATA ANALYSIS AND INTERPRETATIONS

Table. No. 1 Reliability Statistics

<table>
<thead>
<tr>
<th>Cronbach's Alpha</th>
<th>N of Items</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.8</td>
<td>59</td>
</tr>
</tbody>
</table>

Cronbach’s Alpha (α) results are 0.8 that shows the reliability of our research study questionnaire. (Nnally, 1978) & Fraekel & Willen (2003) said that Cronbach’s Alpha (α) never be less than 0.7. Consequently from above table, Cronbach’s Alpha (α) is > (greater than) 0.7. so it considered as tremendous and reliable results (Sekaran, 2003).

DESCRIPTIVE STATISTICS

DEMOGRAPHIC INFORMATION

Gender: In our research study there were 520 (55.3 %) male & 421 (44.7%) female student respondents respectively.

Age: Between 18-20 there were 220 (23.4%), between 21-25 there were 581 (61.7%), between 26-30 there were 91 (9.7%) and above 30 years there were 49 (5.2%).

<tr>
<td>Total</td>
<td>941</td>
<td>100.0</td>
<td>100.0</td>
<td></td>
</tr>
</tbody>
</table>

Our respondents were belongs to five different universities of Pakistan. We got the 191 (20.3%) student’s response from Arid Agricultural University Rawalpindi, 183 (19.4%) students from B.Z. University Multan, 174 (18.5%) student from COMSATS IIT Vehari Campus, 193 (20.5%) from GC University Faisalabad and finally 200 (21.3%) student’s response from NCBA&E-Lahore, Layyah Campus.
Student’s belongs to different discipline. 364 students from Computer Sciences, 322 students from Commerce/Business Administration, 174 from Natural Sciences, 60 from Engineering & Technology, 12 from Arts group and finally 9 from Other Departments.

We’ve analyzed one more thing from this research that most of the students whether male or female. They’ve keen interest in the Cricket, There portion was 352 (37.4%) students. It’s a larger portion of our respondents. Then 214 (22.7%) students were interested in other minor games. At the third number was Bed Minton 146 (15.5%). So we can say that cricket is the most interested game of the students. So Government of Pakistan should contemplate on the National game of Pakistan.

**DESCRIPTIVE STATISTICS**

We’ve analyzed the bi variate (R) Pearson Correlation between “Personality with ECA’s” is 0.154, and between “Personality with Educational Performance is 0.227”. Now Sig. (Significance

**CORRELATIONS**
Role of ECA’s (Extra Curricular Activities) in Personality Development

level) “P” Value is 0.00 in all aspects, and it will always be less than 0.05, so we found the very significant and positive relationship among D.V & I.V, that shows that as much as students participate in ECA’s in their Personality will develop and their academic performance will improve.

**MODEL SUMMARY**

<table>
<thead>
<tr>
<th>Table No. 8</th>
<th>Model Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model</td>
<td>R</td>
</tr>
<tr>
<td>1</td>
<td>.253$^2$</td>
</tr>
<tr>
<td></td>
<td>a. Predictors: (Constant), Educational Performance, Extracurricular Activities</td>
</tr>
<tr>
<td></td>
<td>b. Dependent Variable: Personality</td>
</tr>
</tbody>
</table>

We’ve analyzed the bi variate correlation r (R) value is .253 and $R^2$ is .064, so its indicating that there is strong, significant & positively correlated flanked by Personality (D.V) and Educational Performance & Extracurricular Activities (I.V). However these values might be overestimated, so that we’ve took the “Adjusted R Square” for the better estimation of the values. “Std. Error of Estimation” is 10.895. We also got the “Durbin-Watson” that’s values are 1.794

**ANOVA**

<table>
<thead>
<tr>
<th>Table No. 9</th>
<th>ANOVA$^a$</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model</td>
<td>Sum of Squares</td>
</tr>
<tr>
<td>Regression</td>
<td>7605.612</td>
</tr>
<tr>
<td>Residual</td>
<td>111351.765</td>
</tr>
<tr>
<td>Total</td>
<td>118957.377</td>
</tr>
<tr>
<td></td>
<td>a. Dependent Variable: Personality</td>
</tr>
<tr>
<td></td>
<td>b. Predictors: (Constant), Educational Performance, Extracurricular Activities</td>
</tr>
</tbody>
</table>

In above ANOVA results of Regression shows the relationship flanked by Personality (Big Fives)(D.V) and Educational Performance & Extracurricular Activities (I.V). This table represents the values of “F Test” is 32.034 and as well as “Sig Value” is .000 that shows the considerable relation flanked by Personality (D.V) and Educational Performance & Extracurricular Activities (I.V).

**COEFFICIENTS**

<table>
<thead>
<tr>
<th>Table No. 10</th>
<th>Coefficients</th>
</tr>
</thead>
<tbody>
<tr>
<td>Model</td>
<td>Un standardized Coefficients</td>
</tr>
<tr>
<td></td>
<td>B</td>
</tr>
<tr>
<td>(Constant)</td>
<td>92.015</td>
</tr>
<tr>
<td>Extracurricular Activities</td>
<td>.103</td>
</tr>
<tr>
<td>Educational Performance</td>
<td>.996</td>
</tr>
<tr>
<td></td>
<td>a. Dependent Variable: Personality</td>
</tr>
</tbody>
</table>

Standardized regression of coefficient always predicts the outcome of variables. As the above tables shows that the values of B, Std. Error, Beta, T-Test and Confidence Interval for B in both (Lower & Upper) cases. If the values of the Sig are less than 0.05 then it shows that the “ECA’s” & “Personality Development” have significant results flanked by each other.

**RESIDUALS STATISTICS**

<table>
<thead>
<tr>
<th>Table No. 11</th>
<th>Residuals Statistics</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Minimum</td>
</tr>
<tr>
<td>Predicted Value</td>
<td>-95.45</td>
</tr>
<tr>
<td>Residual</td>
<td>-49.386</td>
</tr>
<tr>
<td>Std. Predicted Value</td>
<td>-2.755</td>
</tr>
<tr>
<td>Std. Residual</td>
<td>-4.533</td>
</tr>
</tbody>
</table>

It’s a linear model of the residuals statistics that supports the random pattern. In both cases “Mean” and “Sum” of residuals are should be equal to “Zero”. It represent $\Sigma e = 0$ and $e = 0$. Here residual statistics are showing the data is appropriate; in other case noon linear residuals are also more suitable here in ECA’s & P.D.
9. FINDINGS

Check the University student’s response regarding ECA’s and Personality. Hypothesis also express that ECA’s develop the personality among university students. Cronbach’s Alpha is 0.8 that retrospective the tremendous reliability of the questionnaire data. data collection from five universities of 941 students was a huge task. Students were belongs to Five different department (CS, Commerce/BA, Natural Sciences, Engineering, Arts and Others) An amazing thing was that among the 941 respondents (students) there were 352 (37.4%) respondents were interested in Cricket, while only 66 (7%) were interested in Hockey, rest of them were in other games. So I think Government of Pakistan should contemplate on the National game. There was strapping, positive and strong correlation “r” (R) and R² values existed among Personality (D.V) and ECA’s & Educational Performance (I.V). Durbin-Watson (1.794) also advocating the significant findings among the whole values. Standardize Coefficient values, T-test scores; Sig values and Confidence Interval for B (Lower & Upper Bond Values) are tremendously representing the significant findings.

10. LIMITATIONS
1. Personality model based on “Five Big” is enormously broad.
2. Respondent students perform in ECA’s only in their leisure time.
3. Huge research required on this topic, but scarcity of funding & time is hurdle.
4. This research study is narrow to personality & ECA’s & Educational Performance.
5. Those students who are doing part time job, they don’t participate in ECA’s, but they’ve very shining personality.

11. CONCLUSIONS AND RECOMMENDATIONS

Prospective ECA’s (thirteen types) always develop the multiple characteristics of the personality, as well as Educational achievement. Pupils of different universities got the confidence and learn how to plan the future among rival groups. Majority of students (male & female) were interested in Cricket, then why still we’re considering Hockey as our (Pakistan’s) national game? So I think Government of Pakistan should contemplate on the National game. Meanwhile personality “Five Big” model was replicated from Norman (1963) that is enormously broad model. It’ll explore many other horizons. If students’ vigorously involve themselves in ECA’s by sacrificing their study, automatically they’ll lose their position in class.

12. RECOMMENDATIONS

12.1. Recommendations for School Counselors
1. Partnership of community always be encouraged.
2. Counselors should reciprocate the shy pupils individually.
3. Counselors should advocate students ECA’s with academia.
4. Barriers should be removed from the participation in activities.
5. Counselors should avoid to practice of risky & dangerous ECA’s.
6. Skip the direct involvement of sponsors and politicians, in ECA’s.
7. Over participation in activities could be perilous for the academia.
8. Encourage the pupils for ECA’s, but also make their schedule for study.
9. Keep in mind the “Best fit” formula, for participation in activities and skills.
10. Students could be preventive the involvement from the risky extracurricular activities.
11. Best learning environment for extracurricular activities should be providing within the premises of university camps.

12.2. Recommendations for Future Research
1. In future diversity of ECA’s will be discussed.
2. Pros & cons of ECA’s should be unveiled by all aspects.
3. How gender discrimination perform separately?
4. How disable students could be encouraged by community to participate in ECA’s?
Role of ECA’s (Extra Curricular Activities) in Personality Development

5. Are all students availing equal opportunities in ECA’s?
6. Only cross-sectional study is not enough, longitudinal research will explore the real picture.
7. Wider research required to find out the positive ways of win-win approach to motivate the students.
