Causes of Rheumatism

Zhe Yin
Department of Mathematics, Yanbian University, China

Abstract: This article clarifies the causes of rheumatism.

Keywords: rheumatism; light; gravitational wave

1. INTRODUCTION

It has been proposed in 2010 that substances change to the direction of increase of atomic weight and molecular weight (Zhe Yin, 2010) and it has also been proposed that spiral trajectory of gravitational waves (Weber, J., 1959 and 2016) and the variable force field is the condition of energy conversion in February 2016 (Zhe Yin and Liu, 2016a,b). The motion trajectory of the electrons, proposed the law of motion that, spiral trajectory gravitational wave produces entanglement in the process of convergence and divergence, increases the energy, in the trajectory of Mobius', and spiral gravitational wave convergences inwards in March 2016 (Zhe Yin, 2016; Zhe Yin, Liu, 2016a,b). Inward convergence is equivalent that the centripetal force is greater than buoyancy and other external field forces, outward divergence equivalent buoyancy and other external field force is greater than the centripetal force. The following description provides the use of gravitational wave theory, to elucidate the propagation pattern of light between the electrons of the gravitational waves. The light has the entanglement between the periodic and the optical blocks with the same properties. The degree of entanglement between the light blocks is expressed by relative energy. Each photoperiod contains four sub-process morphologies, each sub-process morphology, forming a separate, electron-group and entangled form of relative energy set. This article uses the principle of light to clarify the causes of rheumatism.

2. THEORETICAL PREPARATION

Theorem 1 (Gravitational waves existence theory) (Zhe Yin et al., 2016; Zhe Yin, 2017a, b, c,d,e,f).

There are A, B two points. A is the wave source of gravitational field, and B is a point in the gravitational field. The existence of energy rotational motion (including proton, neutron, atomic nucleus or planet) at A is the necessary and sufficient condition of the existence of gravitational waves at B. Direction is the bidirection of the path tangent at point B, and the limit of the convergence direction is a point.

Theorem 2 (Gravitational wave stability theory) (Zhe Yin et al., 2016; Zhe Yin, 2017a, b,c,d,e,f)

A is a gravitational wave source, B is a point in gravitational field of A. The necessary and sufficient conditions of stable gravitational wave at B point are:

\[
\frac{dr}{d\theta} = b, \quad (b \text{ is a constant}).
\]

Inference of theorem 2: If a gravitational wave track meet Archimedean spiral, this must be stable gravitational waves.
There is, \[ r = a + b\theta. \]

\( r \) is the distance of \( A \) to \( B \); \( a \) is the spiral length of \( A \) to \( B \); \( b \) is the distance between the spirals.

3. **The Nature of Light and the Causes of Rheumatism**

According to the gravitational wave equation, the periodic law of light is obtained. Gravitational waves are the propagation of light. Light is the same form of electronic, entangled particles in the form of transmission. Photons have relative energy and quality. Through the electronic entanglement, supplement and increase the energy, gradually increase the average length.

\[ r = a + b\theta \quad \theta \text{ is the radian, the cycle is } 2\pi. \]

**Theorem 1:** The wave of light is periodic and its period is \( 2\pi \).

According to the independence, symmetry, monotonic principle, light has only four forms. Four sub-process morphologies of the photoperiod.

**Theorem 2:** Four independent morphological equations of light

The first sub-process morph equation: \[ r = a + b(2k\pi + 0), k = 0,1,2,3,... \]

The second sub-process morph equation: \[ r = a + b(2k\pi + \frac{\pi}{2}), k = 0,1,2,3,... \]

The third sub-process morph equation: \[ r = a + b(2k\pi + \frac{3\pi}{2}), k = 0,1,2,3,... \]

The fourth sub-process morph equation: \[ r = a + b(2k\pi + \pi), k = 0,1,2,3,... \]

As in different environments, hydrogen atoms can be positively charged or negatively charged, the electron entangled state (photon) can be positively charged or negatively charged. Each sub-process of electrons forms a separate set of photonics form and share relative energy.

Anywhere on Earth, four kinds of photon clusters coexist. The relative energy of the photon is proportional to the wavelength.

The four bases of DNA receive energy, and the two deoxynucleotide chains store energy. The energy is used for DNA transcription. When the genes are produced, DNA receives four photon sets of energy. The first photon subset and the fourth photon subset are monotonically increasing in energy. When the DNA metabolic energy is stored, only the first photon and the fourth photon are collected.

**Rheumatosis Pathogenesis:** DNA base \( A \) and \( T \), \( G \) and \( C \) accept energy, generate electrical energy, stored in two spiral chains. DNA energy is used for transcription. Among them, DNA acid energy comes from light energy. DNA alkaline energy from the food. DNA base between the hydrogen, plays the role of the valve. Human body to accept the lack of light energy, is the first cause of rheumatism. Base and two deoxynucleotides between the potential difference is not large enough, leading to metabolic transport is not smooth, generate a lot of small molecule mRNA and small molecule miRNA. Accelerating the propagation of biological channels of the entrance cells and the proliferation of connective tissue cells, resulting in smaller diameter of the organ channel. Water molecules are deposited, are not smooth, and the hydrogen bases between the DNA bases are destroyed, and the potential difference is permanently destroyed (not full of electricity or leakage). This is the second cause of rheumatism.
Valve function of the hydrogen, the greater the potential difference between the two bases, the greater
the potential difference, the better the insulation function. Figure 1.

According to the literature (Zhe Yin et al., 2012,2014,2015; Zhe Yin, 2017d,e,f), connective tissue cell
proliferation is 3 times the muscle cell reproduction. Connective tissue cell channel minimum, is also a
necessary condition.

Treatment of rheumatism Note: can not rush to expand the diameter of the organ cell channel. Because
the expansion of organ cell channels is the root cause of the onset of diabetes.

4. CONCLUSION
This paper uses the gravitational wave properties to elucidate the causes of rheumatism. The relevant
research will play a due role.
