#### Abstract

Let $G$ be a Simple Graph with Vertex set $V(G)$ and Edge set $E(G)$ respectively. Vertex set $V(G)$ is labeled arbitrary by positive integers and let $E(e)$ denote the edge label such that it is the sum of labels of vertices incident with edge $e$. The labeling is said to be lucky edge labeling if the edge set $E(G)$ is a proper coloring of $G$, that is, if we have $E\left(e_{1}\right) \neq E\left(e_{2}\right)$ whenever $e_{1}$ and $e_{2}$ are adjacent edges. The least integer $k$ for which a graph $G$ has a lucky edge labeling from the set $\{1,2, \ldots, k\}$ is the lucky number of $G$ denoted by $\eta(G)$. A graph which admits lucky edge labeling is the lucky edge labeled graph.In this paper, it is proved that Path $P_{n}$, Comb $P_{n}{ }^{+}$, Cycle $C_{n}$, Crown $C_{n}{ }^{+}$are lucky edge labeled graphs.

## 1. INTRODUCTION

A graph G is a finite non empty set of objects called vertices together with a set of pairs of distinct vertices of G which is called edges. Each $\mathrm{e}=\{\mathrm{uv}\}$ of vertices in E is called an edge or a line of G . For Graph Theoretical Terminology, [2].

## 2. Preliminaries

## Definition: $\mathbf{2 . 1}$

Let $G$ be a Simple Graph with Vertex set $\mathrm{V}(\mathrm{G})$ and Edge set $\mathrm{E}(\mathrm{G})$ respectively. Vertex set $\mathrm{V}(\mathrm{G})$ are labeled arbitrary by positive integers and let $\mathrm{E}(\mathrm{e})$ denote the edge label such that it is the sum of labels of vertices incident with edge e. The labeling is said to be lucky edge labeling if the edge set $E(G)$ is a proper coloring of $G$,that is, if we have $E\left(e_{1}\right) \neq E\left(e_{2}\right)$ whenever $e_{1}$ and $e_{2}$ are adjacent edges. The least integer k for which a graph G has a lucky edge labeling from the set $\{1$, $2, \ldots, k\}$ is the lucky number of $G$ denoted by $\boldsymbol{\eta}(\mathbf{G})$.
A graph which admits lucky edge labeling is the lucky edge labeled graph.
Definition: $\mathbf{2 . 2}$
A Walk of a graph $G$ is an alternating sequence of vertices and edges $v_{1}, e_{1}, v_{2}, e_{2}, \ldots . v_{n-1}, e_{n}, v_{n}$ beginning and ending with vertices such that each edge $e_{i}$ is incident with $v_{i-1}$ and $v_{i}$.

## Definition: 2.3

If all the vertices in a walk are distinct, then it is called a Path and a path of length n is denoted by $P_{n+1}$.
Definition: 2.4
A graph obtained by joining each $u_{i}$ to a vertex $v_{i}$ is called a Comb and denoted by $\mathbf{P}_{\mathbf{n}}{ }^{+}$. The Vetex set and Edge set of $\mathrm{P}_{\mathrm{n}}{ }^{+}$is $\mathrm{V}\left[\mathrm{P}_{\mathrm{n}}{ }^{+}\right]=\left\{\mathrm{u}_{\mathrm{i}}, \mathrm{v}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right\}$ and $\mathrm{E}\left[\mathrm{P}_{\mathrm{n}}{ }^{+}\right]=\left\{\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right): 1 \leq \mathrm{i} \leq \mathrm{n}-1\right\} \cup\left\{\left(\mathrm{u}_{\mathrm{i}} \mathrm{v}_{\mathrm{i}}\right)\right.$ :
$1 \leq \mathrm{i} \leq \mathrm{n}\}$ respectively. $\mathrm{P}_{\mathrm{n}}{ }^{+}$has 2 n vertices and $2 \mathrm{n}-1$ edges.
Definition: 2.5
A closed path is called a Cycle and a cycle of length $n$ is denoted by $\mathbf{C}_{\mathbf{n}}$.

$\mathbf{C}_{\mathbf{n}}{ }^{+}$is a graph obtained from G by attaching a pendent vertex from each vertex of the graph Cn is called Crown.

## 3. Main Results

## Theorem: 3.1

$\mathrm{P}_{\mathrm{n}}$ has $\{\mathrm{a}, \mathrm{b}\}$ lucky edge labeling graph for any $\mathrm{a}, \mathrm{b} \in \boldsymbol{N}$.

## Proof:

Let $\mathrm{V}\left[\mathrm{P}_{\mathrm{n}}\right]=\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{n}\right\}$ and $\mathrm{E}\left[\mathrm{P}_{\mathrm{n}}\right]=\left\{\left(\mathrm{u}_{\mathrm{i}} \mathrm{u}_{\mathrm{i}+1}\right): 1 \leq \mathrm{i} \leq \mathrm{n}-1\right\}$.
Let $\mathrm{f}: \mathrm{V}\left[\mathrm{P}_{\mathrm{n}}\right] \rightarrow\{1,2\}$ defined by

$$
\mathrm{f}\left(\mathrm{u}_{2 \mathrm{i}}\right)= \begin{cases}1 & i \equiv 1 \bmod 2 \\ 2 & i \equiv 0 \bmod 2\end{cases}
$$

and $1 \leq \mathrm{i} \leq(n-1) / 2$, for n is odd and $1 \leq \mathrm{i} \leq n / 2$, for n is even.

$$
\mathrm{f}\left(\mathrm{u}_{2 i-1}\right)= \begin{cases}1 & i \equiv 1 \bmod 2 \\ 2 & i \equiv 0 \bmod 2\end{cases}
$$

and $1 \leq \mathrm{i} \leq(n+1) / 2$, for n is odd and $1 \leq \mathrm{i} \leq n / 2$, for n is even.
Then the induced edge coloring are
whenn is odd, $1 \leq \mathrm{i} \leq(n-1) / 2$ and when n is even, $1 \leq \mathrm{i} \leq(n / 2)-1$

$$
\mathrm{f}^{*}\left(\mathbf{u}_{2 i} \mathbf{u}_{2 \mathrm{i}+1}\right)=3
$$

whenn is odd, $1 \leq \mathrm{i} \leq(n-1) / 2$ and when n is even, $1 \leq \mathrm{i} \leq n / 2$

$$
\mathrm{f}^{*}\left(\mathrm{u}_{2 \mathrm{i}-1} \mathrm{u}_{2 \mathrm{i}}\right)= \begin{cases}2 & i \equiv 1 \bmod 2 \\ 4 & i \equiv 0 \bmod 2\end{cases}
$$

It is clear that lucky edge labeling of $\mathrm{P}_{\mathrm{n}}$ is $\{2,3,4\}$.
Hence, $P_{n}$ has lucky edge labeling graph.
For example, lucky edge labeling of $\mathrm{P}_{6}$ is shown in figure 1 and $\eta\left(\mathrm{P}_{\mathrm{n}}\right)=4$.

It is clear that lucky edge labeling of $\mathrm{P}_{\mathrm{n}}{ }^{+}$is $\{2,3,4,5\}$.
Hence, $\mathrm{P}_{\mathrm{n}}{ }^{+}$hasluky edge labeling graph.
For example, lucky edge labeling of $\mathrm{P}_{5}{ }^{+}$and $\mathrm{P}_{6}{ }^{+}$are given in the figure 2 a and figure 2 b and $\eta\left(\mathrm{P}_{\mathrm{n}}{ }^{+}\right)=5$.

It is clear that the lucky edge labeling of $\mathrm{C}_{\mathrm{n}}: \mathrm{n} \equiv 3(\bmod 4)$ is clearly $\{2,3,4,5\}$.
For example, Lucky edge labeling of $\mathrm{C}_{7}$ is shown in the figure 3 d and $\eta\left(\mathrm{C}_{\mathrm{n}}\right)=5$.
Hence, $\mathrm{C}_{\mathrm{n}}$ has lucky edge labeling graph.

Case 3:

## Lucky Edge Labeling of $P_{n}, C_{n}$ and Corona of $P_{n}, C_{n}$

It is clear that the lucky edge labeling of $\mathrm{C}_{\mathrm{n}}{ }^{+}: \mathrm{n} \equiv 3(\bmod 4)$ is $\{2,3,4,5,6\}$.
For example, Lucky edge labeling of $\mathrm{C}_{7}{ }^{+}$is shown in the figure 4 d and $\eta\left(\mathrm{C}_{\mathrm{n}}{ }^{+}\right)=6$.
Hence, $\mathrm{C}_{\mathrm{n}}{ }^{+}$has lucky edge labeling graph.

## 4. Conclusion

Among all labelling lucky edge labelling has a special importance because it is incorporated with coloring of graphs
